VISHAL K BADGUJAR

Chicago, USA | (312) 774 6234 |vishalbadgujar2106@gmail.com | LinkedIn | GitHub |

SUMMARY

Software Engineer experienced in building scalable full-stack applications with Django, React, and AWS. Delivered AI-powered solutions that reduced manual effort by 60% and improved system performance by 30%+. Focused on creating efficient, real-world systems with strong backend design and clean, reliable architecture.

EDUCATION

Illinois Institute of Technology, Chicago, IL — August 2024 – April 2026
Master of Computer Science, Specialization in Software Development

Sandip University — June 2019 – May 2023
Bachelor of Technology in Computer Science, Honors in Software Engineering

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C++, R, Dart
Databases: MySQL, PostgreSQL, SQL, SQLite, Redis
Web & Backend: Django, Node.js, React.js, Next.js, Flask, FastAPI, Tailwind CSS, HTML
AI/ML: LangChain, LLMs (OpenAI/Anthropic APIs), RAG, NLP, TensorFlow, Scikit-learn
Cloud & DevOps: AWS (Lambda, DynamoDB, API Gateway, S3, ECS), Docker, Azure, GCP

WORK EXPERIENCE

i-tech System — Nashik, India
Software Engineer (Full-Stack & Backend) — June 2022 - June 2024

- Started as a Full-Stack Developer Intern and earned a full-time offer by consistently delivering scalable backend APIs using Python (Django) and building responsive frontend components with React.js, contributing to client-facing and internal platforms.
- Took ownership of backend architecture, including database schema design, REST API development, authentication systems (JWT/session-based), and third-party integrations, ensuring secure, reliable, and scalable application performance.
- Built a Fingerprint-based Attendance Management System that automated employee tracking and reporting, significantly reducing manual effort and improving operational efficiency for organizations.
- Delivered multiple production-grade applications including service platforms and analytics dashboards, supporting business workflows and enabling data-driven decision-making for stakeholders.
- Optimized backend performance through query tuning, indexing strategies, and API enhancements, reducing response time by ~30% and improving system scalability under increasing user load.

PROJECTS

AI Resume Matching & Job Portal | React, Node/Django, NLP, PostgreSQL

- Developed a full-stack job portal with authentication, dashboards, and REST APIs for candidates and recruiters
- Implemented NLP-based resume parsing and embedding similarity search to improve job matching accuracy by 30%+
- Optimized database queries and deployed cloud-hosted backend for fast, scalable performance

Smart Job Search Engine (DSA-Based Search + Ranking) | Python, Django, PostgreSQL, Redis, React, AWS

- Built a search engine using a Trie-based autocomplete and inverted indexing to support fast keyword search across job descriptions
- Implemented top-K ranking using a heap (priority queue) with relevance scoring (TF-like weighting), improving search efficiency and result quality.
- Added LRU caching in Redis for repeated queries, reducing average response time and improving throughput under concurrent requests

AI Requirements Engineering Assistant | LangChain, LLMs, Django, React, AWS

- Built a GenAI tool that converts client inputs into structured SRS, use cases, and test cases using LangChain + RAG + LLM APIs
- Developed full-stack application with Django backend and React frontend, improving documentation time by ~60%
- Deployed serverless services on Amazon Web Services (Lambda, API Gateway, S3) for scalable and low-cost hosting

LLM Customer Support Chatbot | RAG, Flask/Django, AWS

- Built an AI chatbot using LLM + knowledge base retrieval to answer FAQs from company documents
- Created document ingestion and vector search pipeline to provide context-aware responses with higher accuracy
- Deployed serverless backend on AWS, reducing manual support workload by ~50%

Personal Portfolio Website (Responsive & Data-Driven UI)

- Designed and developed a fully responsive portfolio website to showcase projects, experience, and technical skills
- Implemented a data-driven architecture using JavaScript objects, enabling easy content updates without modifying HTML
- Built modern UI with responsive layouts, interactive components, and optimized user experience for recruiter engagement

ACHIEVEMENTS

- Led backend development and technical decision-making for the DogCat Lifestyle pet care platform, owning architecture, database design, and API development.
- Secured 3rd place in University-Level Hackathon for architecting a scalable full-stack web application within a 48-hour development sprint.
